

EPA's CCR Ruling

On April 17, 2015 the U.S. Environmental Protection Agency (EPA) published the final rule for the regulation and management of coal combustion residuals (CCR) under the Resource Conservation and Recovery Act (RCRA).

The rule—effective on October 19, 2015—applies to electric utilities and independent power producers that fall within NAICS code 221112, and the facility produces or stores CCR materials in impoundments or landfills.

In June 2016, the early closure provisions for inactive surface impoundments were cancelled, making them subject to the requirements for existing CCR surface impoundments. The EPA published the direct final rule—effective October 4, 2016—extending deadlines for owners and operators of inactive surface impoundments, who took advantage of the early closure requirements.

How We Can Help

The dust has settled since the EPA published the final CCR ruling. At this point you've decided how to manage ash, and your plant's CCR compliance plans are in place. As you work to implement your plans, we're here to help guide you to the best possible outcome.

Our Solutions

Groundwater Assessment & Remediation: Detection monitoring results will be compiled in 2017 and 2018. We can evaluate the resulting data, and consider background and alternative sources to determine if corrective actions will be required as well as identify cost-effective solutions.

Dewatering: This is a significant hurdle for impoundment closures. Several options are available, and we can work with you to determine the best option based on site-specific conditions.

Effluent Limitation Guidelines (ELG): If you currently discharge ash transport waters, flue gas mercury control system waters, wet flue gas desulfurization scrubber purge, or CCR leachate, we can help investigate the impact the rule may have on your facility and implement corrective actions.

Alternative Closure Methods & Caps Technology: Consider an alternative cover material that has the potential for cost savings and greater design flexibility. The ultimate use of CCR impoundments or landfills provides multiple opportunities for solar power production and revenue generation.

Our Experience

Ash Basin Groundwater Assessment Program for 7 Plants

Duke Energy

- Groundwater assessment and modeling
- Groundwater compliance monitoring
- Seepage identification, evaluation, and discharge reports
- Final reporting

Landfill Expansion

Confidential Client

- CCR used as an on-site beneficial building material to construct mechanically stabilized (MS) wall to optimize landfill capacity
- MS wall used to extend site life and increase airspace capacity without expanding the area of the existing permitted footprint
- Design meets Subtitle D criteria
- Can be constructed as CCR is generated

CCR and ELG Consulting, Engineering, and Design for Multiple Sites

TVA

- Wastewater treatment consulting and design
- Waste and by-product management for wet or dry coal combustion conversion and decommissioning
- Ash landfill siting and studies
- CCR Intelligent Compaction field studies
- Groundwater data review and consultation

CCR Compliance at 5 Power Plants

Confidential Client

- Fugitive dust, civil engineering, project management, groundwater assessment, and annual inspections
- CCR-compliant design and construction engineering oversight of impoundment clean closure plans, landfill expansions, and new landfills and impoundments
- 25 CCR compliance reports

Does the direct final rule apply to me?

This direct final rule applies only to those owners or operators of inactive CCR surface impoundments that complied with the requirement at 40 CFR 257.105(i)(1) by:

- Placing in their facility's written operating record a notification of intent to initiate closure of the CCR unit no later than December 17, 2015
- 2. Providing notification to the relevant State Director and/or appropriate Tribal authority by January 19, 2016, of the intent to initiate closure of the CCR unit
- 3. Placing the notification of intent to initiate closure of the CCR unit on the owner or operator's publicly accessible CCR website no later than January 19, 2016

CCR Compliance Milestones

Checklist for Inactive CCR Surface Impoundments Compliance

April 18, 2017

Prepare fugitive dust control plan					
☐ Initiate weekly inspections of the CCR unit					
☐ Initiate monthly monitoring of CCR unit instrumentation					
June 16, 2017					
☐ Install permanent marker					
July 19, 2017					
Complete the initial annual inspection of the CCR unit					
April 17, 2018					
☐ Document whether CCR unit is either a lined or unlined CCR surface impoundment					
☐ Compile a history of construction					
Complete initial hazard potential classification assessment					

	Complete initial structural stability assessment	☐ Begin evaluating the groundwater monitoring data for statistically significant increases over background levels		
	Complete initial safety factor assessment			
Г	Prepare initial inflow design flood	August 1, 2019		
	control system plan	Prepare initial groundwater monitoring and corrective action report		
	Prepare written closure and post-	·		
	closure care plans	April 16, 2020		
Oct	October 16, 2018	Complete demonstration for placement above the uppermost aquifer		
	Prepare emergency action plan	Complete demonstrations for wetlands		
Ap	April 17, 2019 Install the groundwater	Complete demonstrations for fault areas		
	monitoring system	Complete demonstrations for seismic impact zones		
	 Develop the groundwater sampling and analysis program 	Complete demonstrations for		
	☐ Initiate the detection monitoring program	unstable areas		

CCR Compliance Milestones

Checklist for Active CCR Surface Impoundments Compliance

October 19, 2015 Prepare fugitive dust control plan	Prepare written closure and post-closure care plans		
Conduct required recordkeeping	April 17, 2017		
Provide required notifications	Prepare emergency action plan		
Establish CCR website	October 17, 2017		
☐ Initiate weekly inspections of the CCR unit	Install the groundwater monitoring system		
☐ Initiate monthly monitoring of CCR unit instrumentation	Develop the groundwater sampling and analysis program		
December 17, 2015	☐ Initiate the detection monitoring program		
Install permanent marker	☐ Begin evaluating the groundwater monitoring data for statistically significant increases over background levels		
January 19, 2016			
Complete the initial annual inspection of the CCR unit	January 31, 2018		
October 17, 2016	Prepare initial groundwater monitoring and corrective action report		
Document whether CCR unit is either a lined or unlined CCR surface impoundment	October 17, 2018 Complete demonstration for placement		
Compile a history of construction	above the uppermost aquifer		
Complete initial hazard potential classification assessment	Complete demonstrations for wetlands		
Complete initial structural stability assessment	☐ Complete demonstrations for fault areas ☐ Complete demonstrations for seismic impact zones		
Complete initial safety factor assessmentPrepare initial inflow design flood control system plan	Complete demonstrations for unstable areas		

Checklist for Existing CCR Landfill Compliance

October 19, 2015 Prepare fugitive dust control plan Initiate weekly inspections of the CCR unit Conduct required recordkeeping Provide required notifications Establish CCR website January 19, 2016 Complete the initial annual inspection of the CCR unit October 17, 2016 Prepare initial run-on and run-off control system plan Prepare written closure and post-closure

October 17, 2017

- Install the groundwater monitoring system
 Develop the groundwater sampling and analysis program
 Initiate the detection monitoring program
- Begin evaluating the groundwater monitoring data for statistically significant increases over background levels

January 31, 2018

Prepare initial groundwater monitoring and corrective action report

October 17, 2018

Complete demonstration for unstable areas
